

GUARDIAN®

APPLICATIONS

INTEGRATED ENGINE + COMPRESSOR CONTROL

GUARDIAN® is internationally recognized as a leading solution for rotating equipment applications.

We have leveraged our extensive experience to create a series of panels that meet a wide variety of industrial applications relating to rotating equipment. Whether your need is for small HP vapor recovery, large compression, or any type of process control or liquids pumping, we have a GUARDIAN® panel that will fit your needs and budget.

Our applications work easily with third party equipment. GUARDIAN® seamlessly integrates with customer enterprise systems, incorporating emissions control and engine monitoring systems. This results in optimized fuel consumption and reduced emissions.

The GUARDIAN® advantage lies in the ability to provide scalable, cost-effective and flexible solutions. Customers are able to meet their specific application requirements, without the expense of a custom software solution.
